Yellow-Silver reflective tape offers flame retardant protection certified by NFPA 2112 & EN 469. It is made for FR-clothing and Firefighters uniform. This tape resists to Heat and Fire and keeps its High Visibility. It can be sewn onto FR-jackets, pants or turnout gear.

This Reflective Material is a Textile Fabric coated with a layer of resin with numerous glass micro-lenses impregnated with a special glue into this layer. The light reflects from these micro-lenses and comes back to a car (or other source of light) making the person wearing reflective tape more visual in the dark.

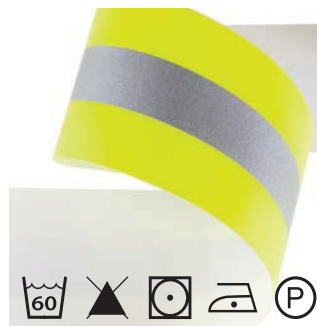

EN 20471

EN 469

NBR 15292

XM SilverLine Reflective tapes and films will have longer life if you follow our care instructions.

Type of work environment, exposure conditions and maintenance have an impact on reflective performance.

Please test each tape according to appropriate care instructions required for the garment.

High-visibility clothing made with reflective material should be maintained in good condition and inspected regularly for damage or deterioration.
